PROJECT EXPERIENCE

Full-Stack Developer (Freelance) | Yugobooth: Automated Photobooth System **2025**

- Developed an automated photobooth system, generating 6-digit monthly revenue within just two months of operation.
- Implemented a bill acceptor payment system with real-time balance tracking and automated session activation, eliminating 100% of the need for customers to pay directly to staff and reducing the risk of mishandling earnings.
- Built an end-to-end workflow, allowing users to insert payment, choose a layout, capture photos, apply filters, print their strip, and scan a QR code for instant access to downloadable soft copies and videos.
- Integrated social media sharing, obtaining user consent for featuring them on the business's social media pages.
- Designed an admin dashboard for real-time analytics, including graphs for total earnings (daily, monthly, past 30 days), session data, and advanced filtering options.
- Enhanced system security with token-based file access and restricted routes for secure data handling.
- Automated operations, reducing manual tasks by over 80%, enabling staff to focus solely on digital payment exchanges and minimal customer support.

Technologies: PHP, JavaScript, MySQL, Python, Arduino, FFmpeg

Full-Stack Developer (Freelance) | BBridge: Barangay Management & Public Service System **2025**

- Developed a digital system to streamline barangay operations and reduce manual processing.
- Built modules for document requests, scheduling, emergency reporting, and payment tracking.
- Implemented role-based access control for secure system usage.
- Integrated real-time notifications to improve service response time.
- Applied OCR (Tesseract) to automate receipt validation and reduce manual verification.
- Designed reporting dashboards for data-driven decision making.
- Integrated geolocation features using OpenStreetMap and Nominatim API to convert coordinates into readable addresses for emergency reporting.
- Implemented real-time location pinning (user location and incident location) for accurate mapping.
- Used GeoJSON to define and display barangay boundaries with polygon mapping.

Technologies: PHP, Tailwind CSS, JavaScript, MySQL, Tesseract OCR, OpenStreetMap (Nominatim API), GeoJSON

IoT Developer (Capstone Project) | HydroTech: Smart IoT Water Dispenser **2024–2025**
GitHub: https://github.com/Nald27/hydrotech-smart-iot-water-dispenser

- Led a development team in building an IoT-based water dispensing system.
- Designed hardware architecture using Arduino and IoT components.
- Developed control systems for sensors, QR authentication, and dispensing automation.
- Integrated hardware with a web-based monitoring system for real-time data tracking.
- Conducted system testing, debugging, and performance optimization.

Technologies: PHP, MySQL, Arduino, ESP8266

WORK EXPERIENCE

Information Technology Intern | DepEd - Schools Division Office, Pampanga **2025**

- Provided technical support to staff, resolving common IT issues.
- Performed basic troubleshooting and maintenance of computers and peripherals.
- Assisted in inventory management of ICT equipment.
- Conducted basic network troubleshooting, including cable creation and daily monitoring of internet speed across all office locations.
- Assisted in testing and verifying functionality of newly delivered keyboards, tablets, and laptops before distribution to teachers.
- Created reports and documentation for office operations.
- Created and edited video tutorials using CapCut, including step-by-step guides for Google Workspace password resets, DepEd M365 account recovery, and multifactor authentication removal.
- Developed Excel-based automation to improve data processing efficiency.
- Encoded 500+ schools details using Microsoft Excel.

Computer Shop Assistant / IT Support | Computer Shop - Guagua, Pampanga **2014–2018**

- Assisted customers daily with computer usage, troubleshooting, and technical concerns.
- Assembled and tested LAN cables for network setups and repairs.
- Maintained and monitored computer units to ensure optimal performance.
- Installed, configured, and updated software, including antivirus and Windows updates.
- Performed hardware upgrades and basic repairs (RAM, peripherals, system formatting).
- Managed customer sessions, time tracking, and billing operations.
- Provided user guidance and technical support, improving overall customer satisfaction.

TECHNICAL SKILLS

Programming Languages: PHP, Python, C++, JavaScript (ES6+), SQL
Web Development: HTML5, CSS3, Tailwind CSS, Bootstrap, WordPress
Databases & API Development: MySQL, REST API Development
Version Control & Tools: Git, GitHub, Visual Studio Code, Trello, Jira, Microsoft 365
Hardware & Electronics: Arduino, ESP8266
Multimedia & OCR: FFmpeg, Tesseract OCR
Other Skills: Hardware & software troubleshooting, network setup & monitoring (LAN, cable testing), administrative/data management, video editing & tutorial creation

EDUCATION

Pampanga State University | Pampanga, Philippines **2021–2025**
Bachelor of Science in Information Technology

CERTIFICATION

Civil Service Examination | Professional Level Passer **August 2025**
