Project Experience

Automated Photobooth System (Yugobooth) 2025
Full-Stack Development | GitHub: github.com/Nald27/yugobooth-photobooth-system

- Developed an automated photobooth system using Arduino Mega, Python, PHP, JavaScript, and MySQL.
- Integrated a bill acceptor payment system with real-time balance tracking and automated session activation.
- Built the end-to-end booth workflow from payment and photo capture to strip generation, printing, and QR-based downloads.
- Implemented photo/video capture, timelapse recording, image filtering, and multi-layout photostrip generation.
- Created an admin dashboard for analytics, session history, audit adjustments, notifications, and consent tracking.
- Strengthened booth reliability and security through token-based file access, restricted public routes, and automated kiosk startup/shutdown scripts.
- Automated the majority of photobooth operations, reducing manual tasks to cash handling, photo cutting, and minimal customer support.

Technologies: HTML • CSS • JavaScript • PHP • MySQL • Python • Arduino • FFmpeg • Ngrok

Barangay Bridge: Barangay Management Information System (Freelance Project) 2025
Full-Stack Development | GitHub: github.com/Nald27/barangaybride

- Developed a full-stack system that digitized barangay operations, reducing manual processing of records and service requests.
- Built core modules including document processing, appointment scheduling, emergency reporting, and payment tracking.
- Implemented role-based access control to secure admin and resident interactions.
- Integrated real-time updates and notifications to improve service response time.
- Applied OCR (Tesseract) for automated receipt validation, reducing manual verification.
- Created reporting and analytics dashboards to support administrative decision-making.
- Designed a scalable backend using PHP (PDO) and MySQL for secure and efficient data handling.

Technologies: HTML • Tailwind CSS • JavaScript • PHP • MySQL • GeoJSON • Tesseract OCR • Nominatim

Hydrotech: Smart IoT Water Dispenser (Capstone Project) 2024-2025
Full-Stack & IoT Development | GitHub: github.com/Nald27/hydrotech-smart-iot-water-dispenser

- Led a development team, overseeing system planning, technical decisions, and task coordination.
- Designed and implemented the hardware architecture using Arduino and IoT components.
- Developed control systems for water dispensing, sensors, QR authentication, and safety mechanisms.
- Integrated IoT hardware with a web-based monitoring system for real-time data communication.
- Conducted system testing, debugging, and integration to ensure reliability and performance.

Technologies: HTML • CSS • JavaScript • PHP • MySQL • Arduino • ESP8266 • IoT Sensors • QR Code Scanner

Experience

Information Technology Intern 2025
Department of Education – Schools Division Office, San Fernando, Pampanga

- Encoded and organized administrative data using Microsoft Excel
- Prepared and submitted accomplishment reports and documentation
- Assisted in inventory management of ICT equipment
- Performed basic troubleshooting and maintenance of computers and peripherals
- Provided technical assistance and support to office staff
- Checked and inspected ICT equipment to ensure proper functionality
- Assisted with basic video editing using CapCut for office-related materials
- Developed Excel import/export functionality to automate data management and simplify data processing workflows.

Technical Skills

Frontend: HTML5, CSS3, Tailwind CSS, Bootstrap, JavaScript (ES6+), WordPress (Basic)
Backend & Database: PHP, Python, C++, MySQL, REST API Development
Tools & Technologies: Git, GitHub, Visual Studio Code, Arduino IDE, Trello, Jira, Microsoft 365, FFmpeg
Soft Skills: Technical Support, Data Management, Administrative Support, Video Editing

Education

Pampanga State University Pampanga, Philippines
Bachelor of Science in Information Technology 2021–2025

Certification

Civil Service Exam Passer August 2025
